

2.2 Parent Functions and Transformations

Parent Functions: The simplest function of a family of functions

Parent Function	Graph	Parent Function	Graph
<p>Linear Function</p> <p>$f(x) = x$</p> <p>$D: (-\infty, \infty)$</p> <p>$R: (-\infty, \infty)$</p>		<p>Absolute Value Function</p> <p>$f(x) = x$</p> <p>$D: (-\infty, \infty)$</p> <p>$R: [0, \infty)$</p>	
<p>Quadratic Function</p> <p>$f(x) = x^2$</p> <p>$D: (-\infty, \infty)$</p> <p>$R: [0, \infty)$</p>		<p>Square Root Function</p> <p>$f(x) = \sqrt{x}$</p> <p>$D: [0, \infty)$</p> <p>$R: [0, \infty)$</p>	
<p>Cubic Function</p> <p>$f(x) = x^3$</p> <p>$D: (-\infty, \infty)$</p> <p>$R: (-\infty, \infty)$</p>		<p>Cube Root Function</p> <p>$f(x) = \sqrt[3]{x}$</p> <p>$D: (-\infty, \infty)$</p> <p>$R: (-\infty, \infty)$</p>	
<p>Reciprocal Function</p> <p>$f(x) = \frac{1}{x}$</p> <p>$D: (-\infty, 0) \cup (0, \infty)$</p> <p>$R: (-\infty, 0) \cup (0, \infty)$</p>		<p>Greatest Integer Function</p> <p>$f(x) = [x]$</p>	

Transformations: How a graph has been moved or the shape has been manipulated

$$y = af(x-h)+k$$

- "a" value determines whether the graph has vertically stretched or compressed.
- "h" value determines whether the graph has shifted left (+) or right (-).
- "k" value determines whether the graph has shifted up (+) or down (-).
- $-f(x)$ demonstrates a reflection across the x axis.
- $f(-x)$ demonstrates a reflection across the y axis.

Directions: State the parent function and the types of transformations. Then, graph the parent function and the transformed function on the graph below.

Example 1: $y = (x-3)^2 + 2$

right 3
up 2
vertex (3,2)

Example 2: $y = -|x-3|$

reflection over x-axis
right 3
vertex: (3,0)

Example 3: $y = 3^{x+1}$

Left 1

Directions: Write the equation of the function with the given transformations.

- a) Quadratic Function; reflection across the x-axis, left 3, down 2

$$f(x) = -(x+3)^2 - 2$$

- b) Absolute Value Function; reflection across the y-axis, vertical stretch by 8

$$f(x) = 8|-x|$$

- c) Square Root Function; right 7, up 9, vertical compression of $\frac{1}{2}$

$$f(x) = \frac{1}{2}\sqrt{x-7} + 9$$
